TryHackMe: suyashgargote26

Summary

Motivated cybersecurity student with hands-on experience in ethical hacking, threat detection, and security-focused software development. Strong foundation in networking, Linux, web application security, and attack detection workflows. Experienced in building AI-assisted security tools and analyzing attacker behavior, with a clear interest in SOC operations, incident response and security environments.

Education

Bachlor Of Technology in Electronics And Computer Science — 2023 – Present
Pillai College Of Engineering,Panvel — Curruent Avg GPA:- 7.71

Technical Skills

Cybersecurity & Networking: Networking (TCP/IP, DNS, HTTP), Linux, Windows internals

Web Security**:** Authentication & authorization, OWASP Top 10, SQL injection, XSS, access control issues

Threat Detection & Security Analysis: Log and alert analysis, Anomaly and suspicious behavior detection, Phishing email analysis and URL inspection. SIEM fundamentals (Splunk – log ingestion, basic SPL searches, alert analysis)

Vulnerability Assessment & Penetration Testing: vulnerability assessment, web application testing

Cloud Security(foundational):Google Cloud shared responsibility model, IAM roles, service accounts, and permissions, Basic cloud network security (firewalls, access controls), Introductory exposure to cloud security monitoring

Programming & Scripting: Python, Bash, javaScript,C/C++

Security Tools: Nmap, Burp Suite, Wireshark, Nikto, SQLmap, JohnTheRipper, Google Dorking, basic OSINT techniques

Projects

AI-Hunter – Autonomous Security Testing & Detection Framework

Designed and built AI-Hunter, an RL-inspired autonomous web vulnerability scanner.Implements action-space exploration, behavioral reward scoring, and confirmation loops to detect XSS and SQLi with reduced false positives.
Focuses on safe, scope-aware scanning for bug bounty and security research use cases. (AI-Hunter)

SacchAI – AI-Powered Cyber Safety & Misinformation

Build Security-Focused platform to identify phishing emails, malicious links, fake news, and deepfake content using Google Gemini,Fact Checking API and VirusTotal API. (Sacch-AI**)**

Password Vault – Python CLI Tool

Secure password manager using Fernet encryption & master authentication.Applied cryptography principles with modular design.(Password Vault)

Bug Bounty & Web Recon Practice

Conducted reconnaissance using Google dorking, subdomain enumeration concepts, and manual testing techniques.Practiced identifying misconfigurations, exposed admin panels, and authentication weaknesses.Focused on ethical testing and responsible disclosure principles.

Experience

GDG PCE Jun 2025 - Present
Technical Member Panvel, India

Organized, planned, and executed technical events and knowledge sessions.

Designed and conducted an **Ethical Hacking workshop** covering cybersecurity fundamentals, attack methodologies, and defensive best practices.

Demonstrated live concepts related to **web application security, reconnaissance techniques, and common attack vectors** in a controlled and ethical environment.

Guided participants on secure development practices and responsible security testing.

Skills & Competencies

Leadership: Led my team during the **Internal Smart India Hackathon (SIH)** selection round.

Communication Skills: Strong presentation and writing skills, developed through Conducting Workshops, Project work, and extracurricular activities.

Team Work: Worked closely with peers, mentors, and faculty while organizing technical events, leading hackathon teams, and building projects.

Self-motivation: Highly self-driven learner with hands-on, self-taught experience in cybersecurity, ethical hacking, and security-focused development. Regularly explore new attack techniques, defensive strategies, and tools through personal projects and practical experimentation.

Networking: Actively grow professional connections on LinkedIn and at industry meet-ups, staying engaged with diverse communities and emerging trends.

Analysis & Problem-solving skills: Skilled at breaking down complex problems and creating efficient solutions, strengthened through coding challenges and project work.

Languages: English(Fluent), Hindi(Fluent), Marathi(Fluent)

Awards and Achievements

Code Clash Winner(CSI-PCE): Secured **1st rank** in an inter-college competitive coding competition organized by the CSI PCE technical committee.

Code Clash Winner((CESA-BVCOE): Achieved **3rd rank** in a **state-level** competitive coding competition organized by CESA, BVCOE.

Vibe coding Winner(CSI-PCE): Won **1st place** in a **2-hour rapid hackathon**, demonstrating problem-solving ability and efficient solution design under time constraints.

Certifications & Learning

CEH (Certified Ethical Hacker) – In Progress

Career Essential in Cybersecurity – Microsoft & Linkedin Learning

Linux 101 – TCM Security

Python(Basic)- Hackerrank
